Microsoft

TEALS Program legacy curricula

When the Microsoft TEALS (Technology Education and Learning Support) Program began in 2019, there were not as many providers creating rigorous high school computer science curricula as there are today. TEALS worked with trusted higher educational institutions to create the following course options:

Introduction to Computer Science

- Introduction to Computer Science – Snap!
- Introduction to Computer Science – Python

AP Computer Science A

- TEALS Program AP Computer Science A

These courses are **no longer being actively developed** beyond minor bug fixes. Some schools and districts have legitimate reasons for wanting to use these options, for instance if it is used throughout their district, it fits well into their pathway, etc.

We suggest you choose a curriculum provider from our Curriculum Overview guide. All providers are vetted by TEALS, have a national reach, and dedicated curriculum teams who actively update and develop the courses!

If you have any questions, please contact your local TEALS representative: https://aka.ms/TEALSContact.
