

Finance insights

AI and automation functionality that redefines transactional finance and empowers data and outcome-driven finance.

Change the game with data and outcome-driven finance

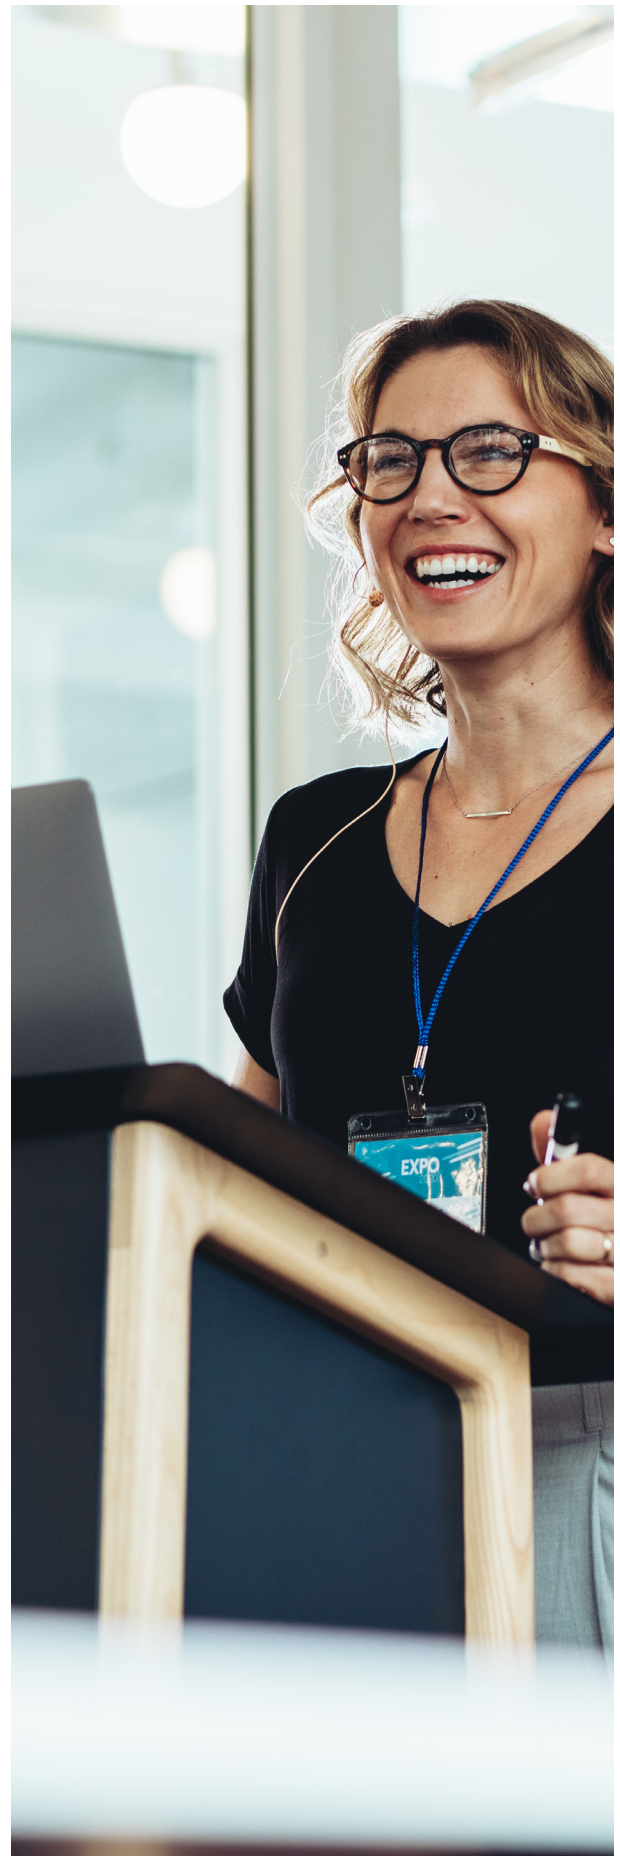

Artificial intelligence is changing the way businesses operate, leveraging unified data to provide strategic insights and automate processes. AI is increasingly integrated into enterprise applications as it is positioned to transform industries. To operate more effectively, finance teams must leverage AI to automate repetitive tasks to streamline processes, get paid faster, and reduce errors and fraud. They require intelligent tools that help them more accurately forecast cash flow and budget more effectively.

Finance insights

Dynamics 365 Finance is a financial management suite that enables organizations to monitor the performance of their global financial operations in real time, predict future outcomes, and make data-driven decisions to drive growth. Financeinsights brings AI and automation functionality to Dynamics 365 Finance, including customer payment predictions, cash flow forecasting, and budget proposals. It is a true game-changer, redefining transactional finance and empowering data and outcome-driven finance.

“Our Global Risk Officer at SOLEVO wanted to have more insights on customer payments, especially to take automatic actions based on the historical analysis for each customer. We hope that finance insights can help us setup a more proactive process and help him getting a better overview.”

Martin Sengel, CIO of SOLEVO Group

Transform your financial operations

Customer payment predictions

Improve cash flow

Leverage AI to increase on-time payments by predicting which payments may be late and proactively automating follow-up to at-risk customers.

Cashflow forecasting

Create more accurate forecasts

Enable you to improve future cash flow projections by leveraging AI, unified data, and "what if" analyses to develop highly accurate forecasts.

Budget proposals

Streamline the budgeting process

Simplify the budgeting process by utilizing historical data, trends, forecasts, and "what if" scenarios to generate budget predictions.
