

Manage risk and privacy

Assess risk, respond to incidents, and secure data—with a single, AI-powered solution

Leverage AI and automation to identify regulatory and compliance challenges, manage response to incidents, and comply with both regulatory and corporate policies.

- Identify and assess regulatory and compliance risk
- Manage response to incidents
- Comply with regulatory and corporate policies
- Optimize efficiency with AI + Automation

Manage sensitive data across your entire digital estate

Manage risks and privacy with a unified solution for data classification and lifecycle management that identifies and locates sensitive, personal, and mission-critical data.

Protect data, close exposure gaps, and comply with regulatory requirements.

- Increase visibility with a unified platform delivered through a single security window
- Use solutions built for AI integration with tools you already use
- Apply the best policies for regulation compliance
- Enhance risk remediation

» Almost 30% of decision-makers can't easily locate their sensitive, business-critical data¹

» Microsoft provides solutions to help identify regulatory and compliance challenges, manage response to incidents and comply with regulatory and corporate policies.

These solutions are natively integrated into the business applications you use every day and provide the productivity benefits of AI while remaining compliant and secure.

A single platform to assess and manage risk

Built on a foundation of trust, security, and privacy, Microsoft provides comprehensive multi-cloud solutions to help you build a compliant and productive workplace.

City government powers customer-centric transformation with Microsoft Purview Records Management

The City of Marion is a suburban area of Adelaide, South Australia, offering around 90 services to its residents, through a similar number of departments, and managing more than AUD\$1.3 billion in assets.

City of Marion chose to build its transformed infrastructure around Microsoft 365 E5 technologies, led by Microsoft Purview Data Lifecycle Management, with the goal of modernized communications, collaboration, and enhanced cybersecurity and compliance.

Find out how their team was able to harness Microsoft Security to raise visibility which, in turn, helped drive more effective and comprehensive analysis and more easily met compliance mandates.

“This last year of using Microsoft Purview Records Management has brought incredible benefits to the City of Marion and my own professional development. I believe it’s the new industry standard for integrated data and information management.”

– Karlheins Sohl, Records Management (RIM) Team Leader, City of Marion

Secure access to data and protect against unauthorized usage or leaks—with the power of AI

Microsoft Copilot for Security empowers your teams to detect and reduce risk related to data accumulation, movement, and exposure. You can identify and manage data related to an incident and refine search results to quickly act with AI-assisted guidance. Copilot helps you protect the compliance and privacy of sensitive data across the data estate. Easily analyze large amounts of data, prioritize action, and mitigate risk at the speed and scale of AI.

- Accelerate the process of identification, response, and remediation of risk by leveraging automation and AI to reduce manual work.
- Analyze the entire data estate, automate the classification of critical data, and assess the severity of regulatory and compliance risk.
- Flexibly manage a variety of events, such as meeting litigation discovery requirements, preparing for an audit, processing freedom of information requests, or Right to be Forgotten requests.
- Empower data owners to enforce data residency and organizational boundaries and avoid multiple repositories by doing more in-place where users already do their work.

Comprehensively identify, prioritize, manage, and mitigate risks

Microsoft Security’s Manage risk and privacy solution helps organizations implement policies to detect and reduce risk related to data accumulation, data movement, and data exposure. Safeguard and retain sensitive data across your data estate, without affecting productivity.
