

Microsoft Access Concepts

A visual tour of the main ideas behind Access

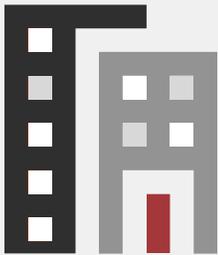

"...relational database technology offers dramatic improvements in productivity both for end users and for application programmers."

E.F. Codd

Used by 95% of
Fortune 500

"We're using it to run our
business. We're an **80 million
dollar** company."

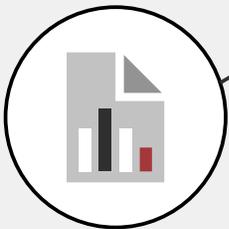

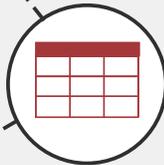

What is it?

"An operational database that stores, manages and tracks real-time business information and that is **often mission-critical.**"

After 25 years, still no alternatives

"What I think Access does, it does extremely well and is the **best bang for the buck.**"

Tables, columns, data types

A database structures data like a matrix and adds constraints to keep it that way

Tables and columns are well-defined

A table represents a single subject, such as a person

Each field has a value that represents a single fact

| ID | Last Name | First Name | Address | City |
|----|-----------|------------|----------------------------|----------|
| 1 | Freehafer | Nancy | 123 1 st Avenue | Seattle |
| 2 | Cencini | Andrew | 123 2 st Avenue | Bellevue |
| 3 | Kotas | Jan | 123 3 st Avenue | Redmond |
| 4 | Sergienko | Mariya | 123 4 st Avenue | Kirkland |
| 5 | Thorpe | Steven | 123 5 st Avenue | Seattle |
| 6 | Neipper | Michael | 123 6 st Avenue | Redmond |
| 7 | Zare | Robert | 123 7 st Avenue | Seattle |

Each row (or record) is unique and has a primary key

All values in a column are the same in meaning and format

A data type indicates the kind of data and the way it's stored

| Data Type | |
|----------------------|------------------|
| <= 255 characters | Short Text |
| <= 64,000 characters | Long Text |
| 1, 2, 4, 8, 16 bytes | Number |
| 8 bytes | Large Number |
| 8 bytes | Date/Time |
| 8 bytes | Currency |
| 4 bytes | AutoNumber |
| 1 byte | Yes/No |
| <= 2 GB | OLE Object |
| <= 8,192 characters | Hyperlink |
| Varies | Attachment |
| Varies | Calculated |
| Varies | Lookup Wizard... |

Fundamental relational database principles

To be efficient, remove redundant data

To be truthful, make data accurate

To be thorough, create table relationships

To be informative, create wide-ranging queries

Relationships are fundamental

Good database design = data integrity

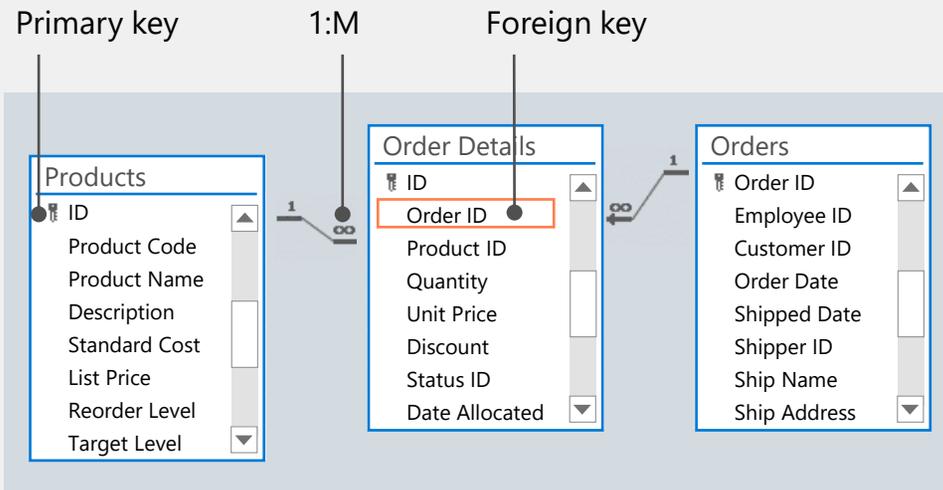

Schema design is a step-by-step approach called normalization

| Normal form | Description | Action |
|-------------|---|------------------------------------|
| Zero | Some columns contain repeating values | Collapse values into one column |
| First | Some columns contain redundant data | Remove redundancy |
| Second | Some columns are not based on the primary key | Move those columns to other tables |
| Third | All columns are based solely on the primary key | Ready for business |

Relationships join tables based on primary and foreign keys

| Type | Symbol | Example |
|--------------|--------|--|
| One-to-one | 1:1 | An employee has one office and each office has one employee |
| One-to-many | 1:M | An employee is within a department, but a department has many employees within it |
| Many-to-many | M:M | Each employee is assigned many projects and each project has many employees assigned to it |

Well-designed schemas make complex requests doable

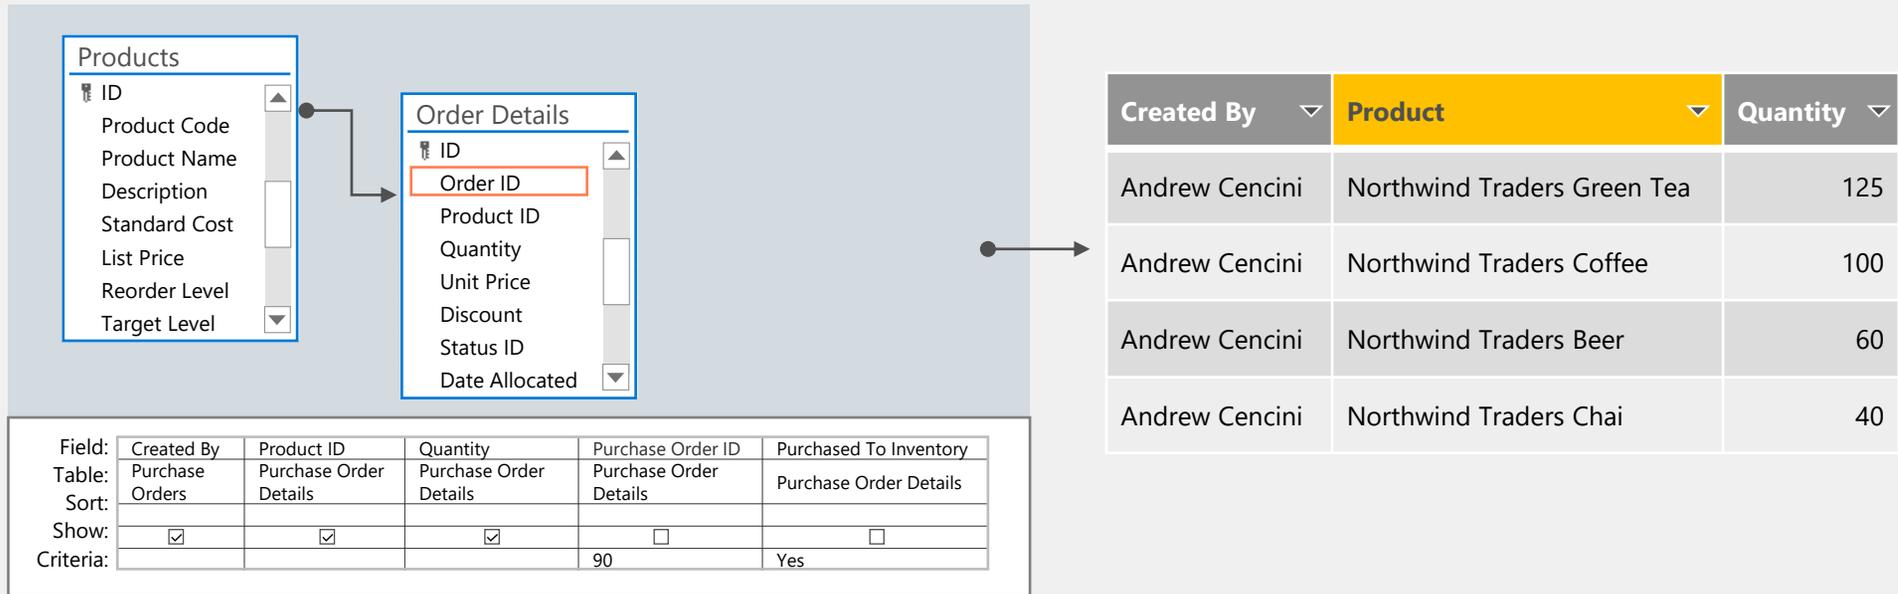

| ORDERS | | PRODUCTS | |
|---------|------------|-----------|------------------------------|
| OrderID | CustomerID | ProductID | ProductName |
| 10248 | WILMK | 11 | Queso Cabrales |
| 10311 | DUMON | 42 | Singaporean Hokkien Fried Me |
| | | 69 | Gudbrandsdalsost |
| | | 72 | Mozzarella di Giovanni |

| ORDER DETAILS | | | |
|---------------|-----------|-----------|----------|
| OrderID | ProductID | UnitPrice | Quantity |
| 10248 | 11 | 21.00 | 12 |
| 10248 | 45 | 14.00 | 10 |
| 10248 | 72 | 34.80 | 5 |
| 10311 | 42 | 14.00 | 6 |
| 10311 | 69 | 28.80 | 7 |

Queries provide answers

At the heart of Access is the query, which retrieves data or performs data actions

Query Type

Definition

| | |
|--------------|---|
| Select | Retrieves only the data that you want, combines data from tables, and defines form and report data sources |
| Parameter | An ad hoc query that prompts you for field values, and then uses those values as criteria for your query |
| Totals | A select query that lets you group and summarize data, such as total sales per product |
| Crosstab | Creates a matrix to re-orient fields in rows and columns, and apply aggregate functions such as Count, Sum, Max |
| Make Table | Creates a new table from a select query |
| Append | Retrieves data from one or more tables and adds that data to another table |
| Update | Changes data in a table based on criteria to specify which rows to update |
| Delete | Removes data from a table based on criteria to specify which rows to remove |
| Pass-through | Runs a query remotely on a database server to help improve performance |

Expressions add value

Calculate values, combine/extract text, specify defaults, validate data

Expressions help enforce business rules

 Must be permanent employee to attend event

 Orders can only be placed on items in stock

 Product codes must be valid when entered

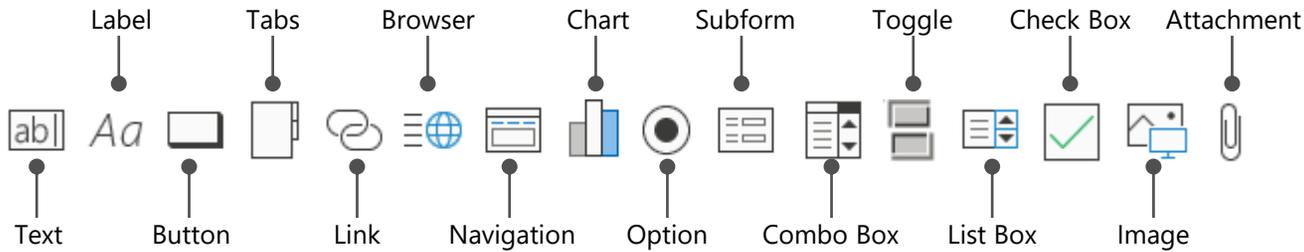

Expressions create meaningful information from data

| Task | Expression | Example | | | | | | | | | | | | | | | | | | | | | | | | |
|-----------------------------------|---|---|--|-------------|------------|--|--------|---------|--------|---|---------|-------|-------------------------------------|----------|-----------|-------------------------------------|-------------------------------------|-------------------------------------|-----------|----------|--|--|------------|--|--|--|
| Sum line items in a report footer | =Sum([Unit Price]) | <table border="1"><thead><tr><th>Item</th><th>Quantity</th><th>Unit Price</th></tr></thead><tbody><tr><td>Mirror</td><td>3</td><td>\$25.53</td></tr><tr><td>Desk</td><td>4</td><td>\$12.32</td></tr><tr><td>Lamp</td><td>6</td><td>\$589.38</td></tr><tr><td>Chair</td><td>4</td><td>\$212.92</td></tr><tr><td>Computer</td><td>1</td><td>\$354.89</td></tr><tr><td colspan="2"></td><td>\$1,195.04</td></tr></tbody></table> | Item | Quantity | Unit Price | Mirror | 3 | \$25.53 | Desk | 4 | \$12.32 | Lamp | 6 | \$589.38 | Chair | 4 | \$212.92 | Computer | 1 | \$354.89 | | | \$1,195.04 | | | |
| Item | Quantity | Unit Price | | | | | | | | | | | | | | | | | | | | | | | | |
| Mirror | 3 | \$25.53 | | | | | | | | | | | | | | | | | | | | | | | | |
| Desk | 4 | \$12.32 | | | | | | | | | | | | | | | | | | | | | | | | |
| Lamp | 6 | \$589.38 | | | | | | | | | | | | | | | | | | | | | | | | |
| Chair | 4 | \$212.92 | | | | | | | | | | | | | | | | | | | | | | | | |
| Computer | 1 | \$354.89 | | | | | | | | | | | | | | | | | | | | | | | | |
| | | \$1,195.04 | | | | | | | | | | | | | | | | | | | | | | | | |
| Find orders shipped in Q1, 2019 | Between #1/1/2019# And #3/31/2019# | <table border="1"><tr><td>Field:</td><td colspan="2">ShippedDate</td></tr><tr><td>Table:</td><td colspan="2">Orders</td></tr><tr><td>Sort:</td><td colspan="2"></td></tr><tr><td>Show:</td><td colspan="2"><input checked="" type="checkbox"/></td></tr><tr><td>Criteria:</td><td colspan="2">Between #1/1/2019# And #3/31/2019#</td></tr><tr><td>or:</td><td colspan="2"></td></tr></table> | Field: | ShippedDate | | Table: | Orders | | Sort: | | | Show: | <input checked="" type="checkbox"/> | | Criteria: | Between #1/1/2019# And #3/31/2019# | | or: | | | | | | | | |
| Field: | ShippedDate | | | | | | | | | | | | | | | | | | | | | | | | | |
| Table: | Orders | | | | | | | | | | | | | | | | | | | | | | | | | |
| Sort: | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Show: | <input checked="" type="checkbox"/> | | | | | | | | | | | | | | | | | | | | | | | | | |
| Criteria: | Between #1/1/2019# And #3/31/2019# | | | | | | | | | | | | | | | | | | | | | | | | | |
| or: | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Create a calculated field | Extended Price: [Quantity] * [Unit Price] | <table border="1"><tr><td>Field:</td><td>Quantity</td><td>Unit Price</td><td>ExtendedPrice: [Quantity]*[Unit Price]</td></tr><tr><td>Table:</td><td>Orders</td><td>Orders</td><td></td></tr><tr><td>Sort:</td><td></td><td></td><td></td></tr><tr><td>Show:</td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td></tr><tr><td>Criteria:</td><td></td><td></td><td></td></tr><tr><td>or:</td><td></td><td></td><td></td></tr></table> | Field: | Quantity | Unit Price | ExtendedPrice: [Quantity]*[Unit Price] | Table: | Orders | Orders | | Sort: | | | | Show: | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Criteria: | | | | or: | | | |
| Field: | Quantity | Unit Price | ExtendedPrice: [Quantity]*[Unit Price] | | | | | | | | | | | | | | | | | | | | | | | |
| Table: | Orders | Orders | | | | | | | | | | | | | | | | | | | | | | | | |
| Sort: | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Show: | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | | | | | | | | | | | | | | | | | | | | | | | |
| Criteria: | | | | | | | | | | | | | | | | | | | | | | | | | | |
| or: | | | | | | | | | | | | | | | | | | | | | | | | | | |

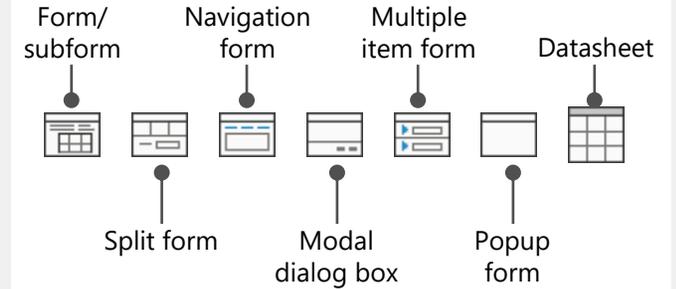

Forms over data

Organize and edit data through rich forms that are windows to your database

Controls are building blocks for forms

Form types

Define input masks

| | | |
|------------|-----------------------|---------------|
| Input Mask | !\(999) '000\ -0000;; | |
| 9 | Northwind Tra | (123)555-0100 |
| (New) | | () _ - _ |

Create a form/subform (1:M relationship)

Customer:

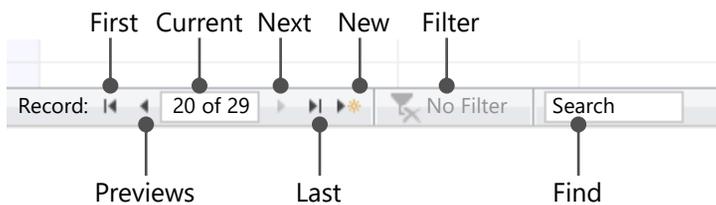

FirstName:

Surname:

Order Id

OrderDate

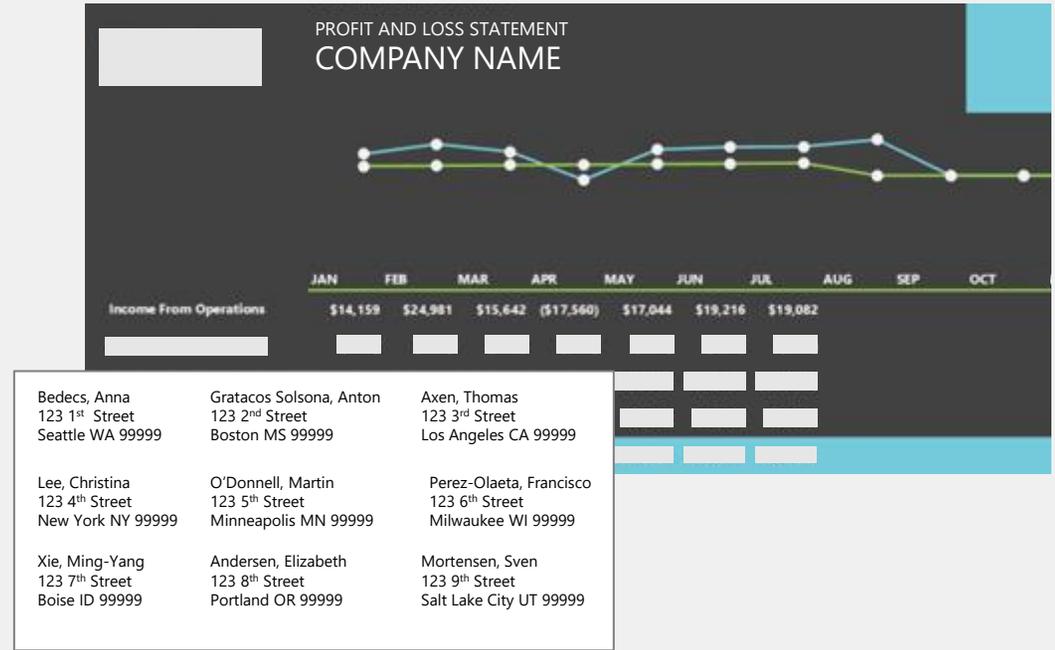

Navigate records easily

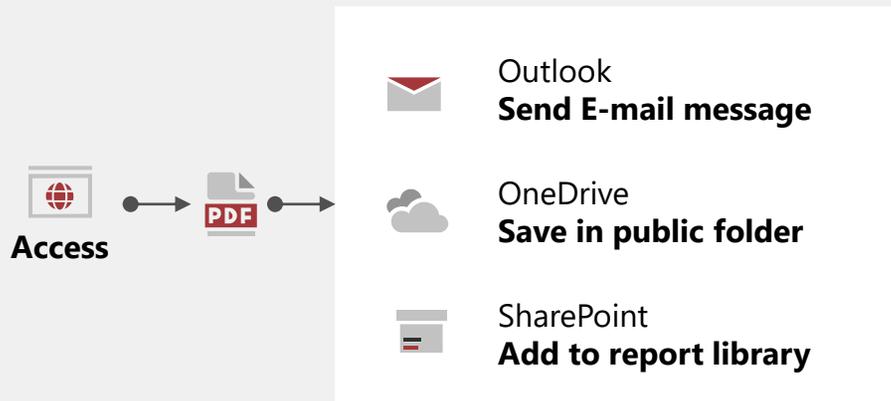

| productId | ItemName | Quantity |
|-----------|----------------|----------|
| 3 | Stapler | 1 |
| 2 | Note Pad A4 | 1 |
| 1 | Box of 20 Pens | 1 |
| 5 | Whole Punch | 1 |
| 8 | Ring Binder | 1 |

Reports over data

Use reports to answer questions, find alternatives, devise strategies, assess risks

Distribute PDF reports on schedule or upon request

Report types by users

| User | Types | Examples |
|--------------------|---|--|
| Frontline worker | Scheduled, easy-to-read, one-pager, attractive graphics | Quality control, invoice, inventory, stock |
| Information worker | Detailed, hierarchical, grouped | Budgets, forecasts, sales summaries |
| Business analyst | Business intelligence (BI), customized (filter, sort, parameters) | Statistical analysis, elaborate charts |
| All | Pretty-printed, informative | Mailing labels, product catalogs, reference manuals, directories |

Extract, Transform, and Load (ETL)

Data is always on a journey, and Access is the landing pad

Extract → Transform → Load

Import/link from:

- ✓ Access
- ✓ Azure SQL Server
- ✓ dBASE
- ✓ Dynamics 365
- ✓ Excel
- ✓ HTML
- ✓ Microsoft Graph
- ✓ OData
- ✓ ODBC
- ✓ Outlook contacts
- ✓ Salesforce
- ✓ SharePoint list
- ✓ SQL Server
- ✓ Text
- ✓ XML

Then, alter data:

- ✓ Join sources
- ✓ Cleanse (correct, convert, validate, reconcile)
- ✓ Shape data for other programs
- ✓ Aggregate, group, summarize
- ✓ Bulk update, append, delete
- ✓ Make tables

Access is like a regional airport for data that: travels from many places, makes changes and connections, and then travels to other places

Finally, export to:

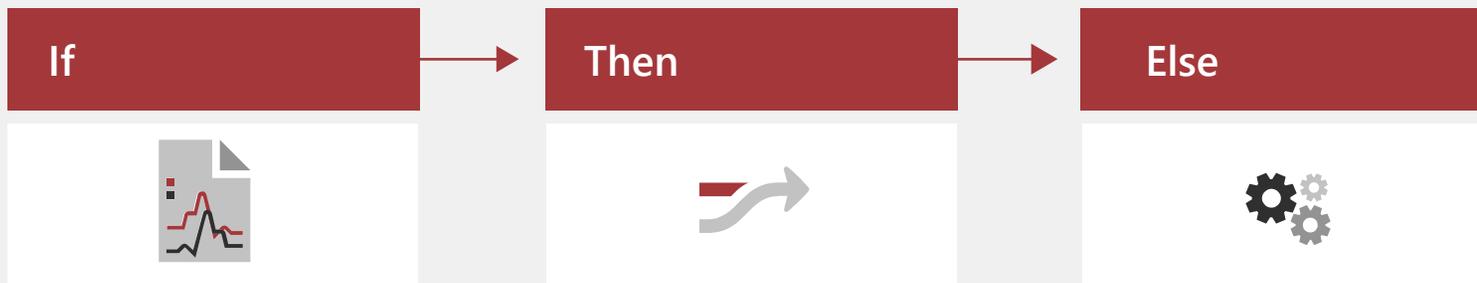

- ✓ Access
- ✓ dBASE
- ✓ Excel
- ✓ HTML
- ✓ ODBC
- ✓ SharePoint list
- ✓ Text
- ✓ XML

Automation

For advanced tasks, use macros and Visual Basic for Applications (VBA)

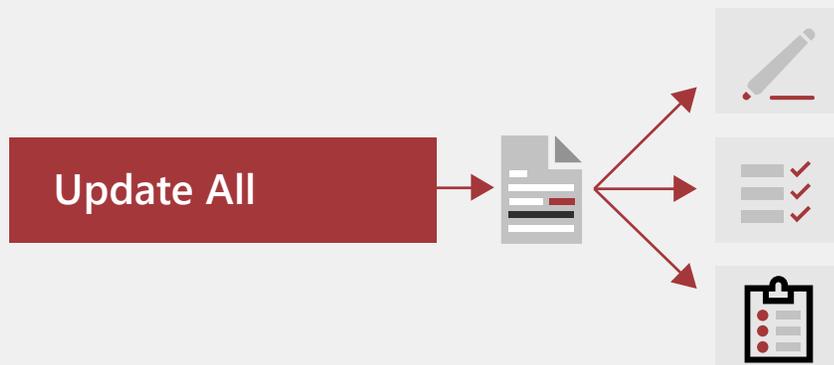

Macros

Automate tasks and add functionality to your forms, reports, and controls without code.

VBA

Use code to iterate through objects, create functions, step through each record, respond to events, call Windows APIs

Migrate to SQL Server

Combine the benefits of Access with the industrial strength of SQL Server

Get Ready

Run SSMA

Convert objects

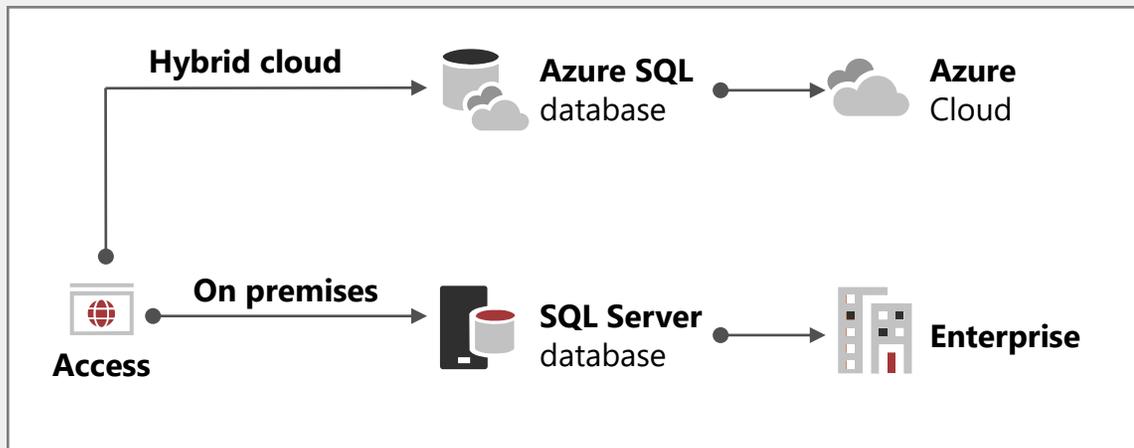

Link tables

Test and revise

Optimize performance

It's a natural evolution

- ✓ Keep your Access front-end (forms, reports, local queries, macros, VBA)
- ✓ Move data and remote queries to an SQL Server back-end

SQL Server benefits:

- ✓ More concurrent users
- ✓ Increased availability
- ✓ High performance, scalability
- ✓ Improved security
- ✓ Immediate recoverability

Azure SQL Server benefits:

- ✓ Dynamic scalability, no downtime
- ✓ Intelligent optimization
- ✓ Global scalability and availability
- ✓ Elimination of hardware costs
- ✓ Reduced administration
