HCLTech | Supercharging Progress™

Vendor consolidation for robust cybersecurity with Microsoft and HCLTech

Protect and optimize your organization's security infrastructure.

In the ever-evolving landscape of enterprise cybersecurity, businesses have become increasingly dependent on a varied and complicated array of vendors. In turn, this results in the rising complexity and cost of managing multiple vendors and products, which can significantly increase an organization's risk profile. Vendor consolidation enables organizations to simplify their security landscape, enhance security posture, improve threat response, reduce security gaps, and increase operational visibility and resource productivity.

HCLTech offers Microsoft-based vendor consolidation, providing businesses with comprehensive solutions designed to simplify security, reduce licensing costs, and enhance operational efficiency. With our single point of contact for support and management, we help deliver an outcome-based approach to enterprise security that allows organizations to focus on growth and innovation.

Microsoft offers a suite of security products under its M365 E5 and Azure Licensing umbrella. Customers that have Microsoft 365 E5 Security can replace 25+ other security vendors. Effective usage of E5 Licenses could help organizations achieve effective security vendor consolidation. Microsoft M365 E5 covers essential security controls, including Identity, data security, Threat Protection, and compliance.

HCLTech's approach to Product consolidation

Assessment

We thoroughly assess your existing security infrastructure to understand your unique requirements.

Customized roadmap

Based on the assessment, we develop a customized security roadmap based on Microsoft security solutions that align with your organizational goals and address your specific challenges.

Integration with existing solutions

We seamlessly integrate Microsoft security solutions with your existing systems and services, optimizing efficiency and eliminating silos.

Continuous management and support

We provide continuous management and support to ensure the effectiveness and reliability of your consolidated security ecosystem

Value Proposition

Technology benefits: Tight integration between security controls, eliminating security gaps and threat entry points.

Operational efficiency: Well-integrated security controls facilitate a consolidated view, leading to better SLAs and response times. The homogenous vendor products allow better training, cross-skilling, and resource management helping the operations team to enhance the productivity level.

Cost Efficacy: Microsoft-based security consolidation could result in up to 52% savings per user in context with userbase and security infrastructure for product licensing. Product consolidation further results in the reduction of operation and training costs.
