Microsoft Entra Verified ID

The next step in the evolution of digital identity

Microsoft Entra Verified ID represents the next phase in the evolution of digital identity, introducing vital functionalities essential in today's ever-evolving digital landscape.

Entra Verified ID leverages innovative standards such as Decentralised Identifiers (DIDs) and the Verifiable Credential Data Model. These open standards simplify the support for Business-to-Business (B2B) staff transitions, fostering trust through DIDs without the intricacies of managing federated relationships.

Organisations can use Entra Verified ID to issue credentials and attributes to users, following the interoperable Verifiable Credential Data Model. This results in a portable digital identity that users can share as needed, enhancing flexibility and security.

Entra Verified ID has been meticulously crafted to assist organisations in tackling contemporary identity verification challenges and facilitating zero trust decision-making processes.

Core benefits

Optimised Staff/User On-Boarding and Access: offering organisations opportunities to optimise staff and user on-boarding and minimise the friction of accessing digital services or physical sites.

Secure Credentials: Verifiable credentials are cryptographically secure enabling organisations to build trust frameworks with their partners and users.

User Managed Eligibility: Users hold and manage the distribution of their own personal data. Verifiers request only the information they need and users decide whether or not to provide it.

Integration: ability to issue verifiable credentials using data stored in existing IT systems, such as Azure AD, to leverage the data already organised and stored within an organisation.

Cost Savings: Trust is formed through user held credentials rather than building and maintaining complex centralised systems or interchange processes to keep records synchronised.

Decentralized Identity Solutions
Condatis Staff Passport

Sellafield Ltd Nuclear Staff Passport
Empowering 11,000 employees to move seamlessly

Working together with Sellafield and Digital Catapult, Condatis are exploring **decentralized identity** using our Staff Passport platform to augment and expand identity management capabilities. The staff passport enables our Sellafield's highly skilled staff to seamlessly **move between locations** and **provide records** of essential training and certifications to carry out their specialised work.

NHS Digital Staff Passport
Streamlining HR onboarding for rapid staff deployment

Condatis have developed a Digital Staff Passport (DSP) for NHS X. The DSP helps our client **streamline HR processes** and enables them to **move staff between sites** easily, allowing healthcare professionals to go where they're needed most. The product enables access provisioning for systems and sites and radically speeds up onboarding, ensuring patients receive the essential care they need.

About Condatis

Condatis is a Microsoft Solutions Partner for Digital & App Innovation Azure. We deliver bespoke Identity and Access Management solutions leveraging Microsoft Entra.

We enhance Microsoft technology to offer practical solutions where IT infrastructure is complex and messy. Our team of over 50 experts are skilled in consolidating and streamlining systems to improve user experience and reduce the friction, risks and costs that are holding you back from success.
